Discrete	Fourier '	Transform & Fast	Fourier Tran	sform	-				
DSP Pre	DSP Preliminaries								
Discrete time signals: Sequences; representation of signals on orthogonal basis, Basic elements									
of DSP and its requirements, advantages of Digital over Analog signal processing.									
Definitio	on and Pro	perties of DFT, IDF	T, Circular co	nvolution o	f sequences u	sing DFT	and IDFT		

Syllabus for Final Year Engineering (Electronics and Telecommunication Engineering) w.e.f. 2021 – 22 Page **5** of **69** 

(Maximum N=8). Twiddle factor. Fast Fourier Transforms (FFT), Radix-2 decimation in time and decimation in frequency FFT algorithms, inverse FFT, and introduction to composite FFT.									
		2							
Unit–II:	No. of Lectures: 09 Hours	Marks: 12							
IIR Digital Filters Concept of analog filter design (required for digital filter design), Design of IIR filters from analog filters by impulse invariance method, Bilinear transformation method. IIR filter realization using direct form, cascade form, parallel form and transposed form. Butterworth filter, Chebyshev, Elliptic Approximation Lowpass, High pass, Bandpass and Bandstop filters design using frequency transformation (Design of all filters using Lowpass filter)									
Unit–III:	No. of Lectures: 08 Hours	Marks: 12							
Advantages and disadvantages of FIR over IIR filter, Minimum Phase, Maximum Phase, Mixed Phase and Linear Phase Filters. Location of the zeros of linear phase FIR filters. Design of FIR filters using Window techniques (Rectangular, Hamming, Hanning, Blackmann, Kaiser), Design of FIR filters using Frequency Sampling technique, Comparison of IIR and FIR filters. Gibbs phenomenon. FIR filters realization using direct form, cascade form and linear phase form.									
1									
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12							
Unit–IV: Finite Word Length effects Quantization, truncation and error, Product quantization er oscillations, Overflow limit c of IIR digital filters, Finite w Multirate DSP, Introduction Application of Multirate sign processing and Radar signal	No. of Lectures: 08 Hours in Digital Filters rounding, Effects due to truncation a rror, Coefficient quantization error, Z cycle oscillations, Scaling. Quantizat ord length effects in FIR digital filte to Up sampler, Down sampler and tw nal processing in communication, Mu processing.	Marks: 12 and rounding, Input quantization Zero-input limit cycle ion in Floating Point realization rs. vo channel filter bank, usic processing, Image							
Unit–IV: Finite Word Length effects Quantization, truncation and error, Product quantization er oscillations, Overflow limit c of IIR digital filters, Finite w Multirate DSP, Introduction t Application of Multirate sign processing and Radar signal	No. of Lectures: 08 Hours in Digital Filters rounding, Effects due to truncation a rror, Coefficient quantization error, 7 cycle oscillations, Scaling. Quantizat ord length effects in FIR digital filte to Up sampler, Down sampler and tw al processing in communication, Mu processing.	Marks: 12 and rounding, Input quantization Zero-input limit cycle ion in Floating Point realization rs. vo channel filter bank, usic processing, Image							
Unit–IV: Finite Word Length effects Quantization, truncation and error, Product quantization er oscillations, Overflow limit c of IIR digital filters, Finite w Multirate DSP, Introduction of Application of Multirate sign processing and Radar signal p Unit–V:	No. of Lectures: 08 Hours         in Digital Filters         rounding, Effects due to truncation a         rror, Coefficient quantization error, Z         cycle oscillations, Scaling. Quantizat         ord length effects in FIR digital filte         to Up sampler, Down sampler and tw         al processing in communication, Mu         processing.	Marks: 12 and rounding, Input quantization Zero-input limit cycle ion in Floating Point realization rs. vo channel filter bank, usic processing, Image Marks: 12

<b>Optical</b>	Fibers-St	ructures Wav	e guiding and	l Fabrica	tion				
Introduction to vector nature of light, Ray model, wave model. Block diagram of Optical									
communication system, Light system components, Optical transmitters, optical Receivers									
Advantage and Disadvantage of OFCS over other communication systems.									
Ray theory of transmission and concept of acceptance angle and Numerical Aperture (Numerical									
based on	based on Ray theory),								
Propagat	Propagation of light, Meridonial and skew propagation,								

Wave theory of optical propagation: cut – off wavelength. Group velocity and Group delay.									
Fabrication methods of fibers –	OVD, MCVD, VAD Process.								
Unit–II:	No. of Lectures: 09 Hours	Marks: 12							
Optical Fibers and Signal De	gradation								
Different types of optical fibers	}-								
Fiber profiles-Step index fibers,	Graded index fibers								
Fiber modes –Optical modes No	ormalized frequency Single mode	step index, Multimode step							
index, Multimode Graded index (Numerical on mode theory).									
Signal degradation on optical fiber due to dispersion and attenuation.									
Attenuation, Absorption, Absor	rption due to atomic defects, Extri	insic Absorption ,Intrinsic ,							
Absorption ,scattering loss- Lin	ear and Nonlinear loss, bending lo	osses.							
Signal distortion in optical fiber	: Information capacity determinat	tion,							
Material dispersion, waveguide	dispersion, intermodal dispersion	, Pulse broadening in Graded							
Index fiber (Numerical on puls	e dispersion and pulse broadening	<i>(f</i> )							
	No. of Lectures: 08 Hours	Marks: 12							
Optical Sources and Detectors									
Sources : Factors or Characteris	stics for their selection in OFCS,								
Light Emitting diodes: Surface	e emitter, LEDS, Edge emitter LE	DS, LED operating							
Lagan diada: Lagan principlag	ins of surface and Edge emitters,	innation I again atrin anomanter							
Laser diode: Laser principles, s	semiconductor laser diode, Hetero	Junction Laser, stripgromentry							
Detector nonematorial Cutoff una	valer oth Quantum offician ov Da	an ancivity and of Despense							
(Numerical based on detector	vereingili ,Qualituili efficiency, Re	sponsivity, speed of Response							
<b>Detectors:</b> Characteristics or fa	stors for their Selection <b>D</b> N phot	to diada DIN Photo diada							
Avalanche photodiode (No Nu	merical on Detectors)								
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12							
Optical Receivers.									
Optical link design- Power budy	get, Rise time budget.(No Numeri	cal)							
Sources of power penalties, M	Iodal Noise, Dispersion Broadening	ng, Mode partition noise,							
Frequency Chipring. BER calcu	lation, Quantum limit.(Derivation	n not required and No							
Numerical)									
Fiber Splicing-Fusion Splicing,	V-groove Splicing. Fiber Connec	tors- ST,SC,MTRJ(only							
Overview)									
<b>Optical Fiber Measurements:</b>	Measurement of Attenuation, refu	ractive index. Optical time							
domain reflectometry (OTDR).		-							
Unit–V:	No. of Lectures: 08 Hours	Marks: 12							
Advanced Optical Systems									
Advanced Techniques: Wavel	ength Division Multiplexing (WD	M), Dense Wavelength							
Division Multiplexing (DWDM).									
WDM components-2*2 Fiber 0	Coupler, Star Coupler, Optical Iso	lator.							
Optical amplifiers,- Semicond	uctor Amplifier, Raman Amplifier	r, EDFA.

Unit–IV:	No. of Lectures: 09 Hours	Marks: 12
Introduction to MEMS and NE	MS, working principles, as micr	o sensors (acoustic wave sensor,
biomedical and biosensor, chem	nical sensor, optical sensor, capac	citive sensor, pressure sensor and
thermal sensor), micro actuati	on (thermal actuation, piezoele	ctric actuation and electrostatic
actuation-micro gripers, mot	ors, valves, pumps, acceleron	meters, fluidics and capillary
thermoelectricity MEMS/NEM	Issive micro iluidic devices, P	Sputter deposition Europeration
Chemical vapor deposition etc	is design, processing, Oxidation,	Sputter deposition, Evaporation,
Chemical vapor deposition etc.		
Unit-V	No. of Lectures: 09 Hours	Marks: 12
Introduction – Scaling of physic	cal systems – Geometric scaling	& Electrical system scaling. The
Single-Electron Transistor: The	e Single- Electron Transistor S	ingle-Electron Transistor Logic,
Other SET and FET Structures,	, Carbon Nanotube Transistors (1	FETs and SETs), Semiconductor
Nanowire FETs and SETs,C	Coulomb Blockade in a Nano	capacitor, Molecular SETs and
Molecular Electronics.

Syllabus for Final Year Engineering (Electronics and Telecommunication Engineering) w.e.f. 2021 – 22 Page 22 of 69

Search, Problem characterist	ics, Production System: Wat	ter Jug problem. Knowledge								
Representation Issues, Know	vledge Representation using	Predicate Logic, Knowledge								
Representation using Rules .										
Unit–II:	No. of Lectures: 09 Hours	Marks: 12								
Neural Network										
Characteristics of Neural Networks: Features of Biological Neural Networks, Biological Neural										
Networks, Performance Compa	Networks, Performance Comparison of Computer and Biological Neural Networks									
Artificial Neural Networks:	Terminology, Models of Ne	euron: McCulloch-Pitts Model,								
Perception, Adeline Topology	v, Basic Learning Laws ,Learn	ning Methods: Supervised and								
unsupervised, Introduction to M	Iultilayer Perceptron, various acti	ivation functions.								
Unit–III:	No. of Lectures: 08 Hours	Marks: 12								
Fuzzy Logic										
Introduction to fuzzy sets and fu	uzzy logic systems, Fuzzy set def	finitions, operations, Fuzzy rules,								
Fuzzy reasoning. Fuzzy inferen	ce systems, Fuzzy models.									
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12								
Introduction to Machine Le	earning: Types of Machine Le	earning Algorithms, Supervised								
Learning, Unsupervised learning	ng, Reinforcement Learning, Cla	ssification of Machine Learning								
Concept, Distance Based Machine	ine learning Methods, K-Nearest	Neighbor (kNN).								
Introduction to Clustering Te	echniques, Possible Application	ns, Requirements of clustering								
algorithm, Problems associated	with using Clustering Techniqu	e, Types of Clustering Methods,								
Clustering Strategies.										
•										
Unit–V:	No. of Lectures: 08 Hours	Marks: 12								
Classification / Regression:	Classifications, decision tree	learning, naive bayes, linear								
regression, logistic regression	n, Linear regression models, su	pport vector machine, beyond								
binary classifications: multiclas	s or multinomial classification.									
Text Books:										
1. Elaine Rich, Kevin Knight a	and Shivshankar Nair "Artificial ]	Intelligence". 3rd Edition TMH.								
2. V.K. Jain, Machine Learnin	g, Khanna Publishing House.									
3. Rajiv Chopra, Deep Learnin	ig. Khanna Book Publishing, Nev	w Delhi.								
4. Vinod Chandra S.S., Artific	ial Intelligence & Machine Learn	ning, PHI.								
5. Rajasekaran and G.A. Vijay	alakshmi, "Neural Networks, Fu	zzy Logic, and Genetic								
Algorithms", PHI .										
<b>Reference Books:</b>										
1. Rajiv Chopra, Machine Lea	rning, Khanna Book Publishing,	New Delhi.								
2. Mitchell Tom, Machine Lea	rning. McGraw Hill, 1997.									
3. Ethem Alpaydin, Introduction	on to Machine Learning, PHI.									
4. Timothy J Ross, "Fuzzy Log	gic with Engineering Application	", TMH.								
5. S. N. Sivanandam & S. N.	Deepa, Principles of Soft Compu	ting, Wiley - India,								
2007

3. S. Sridhar, "Digital Image Processing", Oxford University Press, Second Edition, 2012.4. Robert Haralick and Linda Shapiro, "Computer and Robot Vision", Vol I, II, Addison Wesley, 1993.

### **Guide lines for ICA:**

Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.

### **Guidelines for ESE:**

ESE will be based on the Laboratory assignments submitted by the students in the form of journal. In the ESE (PR), the students may be asked to perform the practical assignment with minor modification.

Evaluation will be based on the paper work of algorithm, understanding of the logic and the syntax, quality of the program, execution of the program, type of input and output for the program.

### **Guide lines for ICA:**

Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.

### **Guidelines for ESE:**

ESE will be based on the Laboratory assignments submitted by the students in the form of journal. In the ESE (PR), the students may be asked to perform the practical assignment with minor modification.

Evaluation will be based on the paper work of algorithm, understanding of the logic and the syntax, quality of the program, execution of the program, type of input and output for the program.

remaining part of the project. Assessment for the project shall also include presentation by the

students. Each teacher can guide maximum 04 groups of projects.

The students should take project work, as specified in the curriculum, based on the knowledge acquired by the students during the degree course till Semester – VI and/or during Internship. The project must be practical or involving both theoretical and practical work to be assigned by the Department. The work may also be Study/Survey/Design or R&D work. The work may also be on specified task or project assigned to the students during Internship.

Project (Stage – I) may involve literature survey, problem identification, design methodology, collection of data, conduction of experiments and analysis etc. The project work shall involve sufficient work so that students get acquainted with different aspects of design, analysis and fabrication. Approximately more than 50% work should be completed by the end of Semester – VII. Each student group should submit partial project report in the form of thermal bound at the end of Semester –VII. Assessment for the project shall also include presentation by the students.

Each student group is required to maintain separate log book for documenting various activities of the project.

Suggestive outline for the partial project report is as follows.

# Abstract

# **Chapter 1. Introduction**

- Background / Literature Survey.
- Motivation
- Problem Definition
- Scope
- Objective
- Selection of Life cycle Model for Development
- Organization of Report
- Summary

### **Chapter 2. Project Planning and Management**

- Feasibility Study
- Risk Analysis
- Project Scheduling
- Effort Allocation
- Cost Estimation
- Summary

### Chapter 3. Analysis

- Requirement Collection and Identification
- H/w and S/w Requirement (Data, Functional and Behavioral)
- Functional and non-Functional Requirements
- Software Requirement's Specification (SRS)

Syllabus for Final Year Engineering (Electronics and Telecommunication Engineering) w.e.f. 2021 – 22 Page **35** of **69** 

### • Summary

### Chapter 4. Design

- System Architecture and Design Methodology.
- Circuit Diagram and Data Flow Diagram / Flow chart.
- UML Diagrams (Use case, Class, Sequence, Component, Deployment, State chart, Activity diagram etc.)
- Summary

# **Chapter 5. Result, Conclusion & Future Work**

Bibliography

Appendix

# **Guide lines for ICA:**

The Internal Continuous Assessment (ICA) for project shall be based on continuous evaluation of students' performance, active participation, knowledge / skill acquired throughout semester and presentation by the students. The assessment shall be done jointly by the guide and departmental committee. A three-member departmental committee including guide, appointed by Head of the department, shall be constituted for the assessment. The assessment for Project (Stage – I) in Semester – VII shall be as per the guidelines given in Table – A.

				Tal	ble – A

	Marks	5	5	5	5	5	10	15	50		

# **Guidelines for ESE:**

In End Semester Examination (ESE), the student may be asked for presentation / demonstration and questions on Project. Evaluation will be based on answers given by students in oral examination.

# Essence of Indian Traditional Knowledge

### **Course objective:**

The course aims at imparting basic principles of thought process, reasoning and inferencing, sustainability is at the core of Indian traditional knowledge system connecting society and nature. Holistic life style of yogic science and wisdom capsules in Sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions. The course focuses on introduction to Indian knowledge systems, Indian perspective of modern scientific world-view, and basic principles of yoga and holistic health care system, Indian artistic tradition.

### **Outcomes:**

Ability to understand, connect up and explain basics of Indian traditional knowledge in modern scientific perspective.

### **Course Contents:**

Introduction to:

- 1. Ayurveda, Charaka Samhita, Sushruta Samhita Principles and Terminology: Vatha, Pitha, Kapha, Ether, Earth, Water, fire and Air Tatva, Influence of these on human health.
- 2. Architecture: Temple Architecture, Indo Islamic Architecture, Mughal Architecture, Indian Rock Cut Architecture, Vastu Shastra.
- 3. Importance of Yoga for Physical and Mental health, Yoga Sutras of Patanjali, Meditation, International day of Yoga.
- 4. Indian Classical Music, Hindustani and Carnatic Music, Raga, Tala, Dhrupad, Khyal, Tarana and Thumri, Sangitaratnakara, Work of Tansen, Purandara Dasa, Bhimsen Joshi, Ustad Bismillah Khan, Bal Gandharva etc.

Folk Music and Dances such as Rajasthani, Marathi, Gujrati, Punjabi etc.

5. Indian Classical Dances: Shastriya Nritya, Natya Shastra, Bharatanatyam, Kathak, Kuchipudi, Odissi, Kathakali, Sattriya, Manipuri, Mohiniyattam and Chhau dance forms.

of radiation, Radiation pattern, near- and far-field regions, effective aperture, polarization, input impedance, efficiency, Friis transmission equation, radiation integrals and auxiliary potential functions. Unit–II: No. of Lectures: 09 Hours Marks: 12 Antenna Arrays, Radiation from Wires and Loops-Antenna array concept, Analysis of uniformly spaced arrays with uniform and non-uniform excitation amplitudes, extension to planar arrays. Infinitesimal dipole, finite-length dipole, linear elements near conductors, dipoles for mobile communication, small circular loop. Unit–III: No. of Lectures: 08 Hours Marks: 12 Aperture Antennas-Huygens' principle, radiation from rectangular and circular apertures, design considerations, Babinet's principle, Radiation from sectoral and pyramidal horns, design concepts. Broadband Antennas: Broadband concept, Log-periodic antennas, frequency independent antennas. Unit–IV: No. of Lectures: 08 Hours Marks: 12 Microstrip Antennas-Concept, Advantages and disadvantages, Basic characteristics of microstrip antennas, feeding methods, methods of analysis, design of rectangular and circular patch antennas. Unit–V: No. of Lectures: 08 Hours Marks: 12 **Wave Propagation** -The three basic types of propagation: Ground wave, space wave and sky wave propagation. Sky Wave Propagation: Structure of the ionosphere - Effective dielectric constant of ionized region - Mechanism of refraction - Refractive index - Critical frequency - Skip distance -Effect of earth's magnetic field - Energy loss in the ionosphere due to collisions - Maximum usable frequency - Fading and diversity reception. Space Wave Propagation: Reflection from ground for vertically and horizontally polarized waves - Reflection characteristics of earth - Resultant of direct and reflectedray at the receiver - Duct propagation. Ground Wave Propagation: Attenuation characteristics for ground wave propagation -Calculation of field strength at a distance. **Text Books:** 1. C. A. Balanis, "Antenna Theory and Design", 3rd Ed., John Wiley & Sons., 2005. 2. Antennas And Wave Propagation by: K.D.PRASAD **Reference Books:** 1. Harish A. Introduc	Introduction to ARM processors and its versions, ARM7, ARM9 & ARM11 features, advantages								

Syllabus for Final Year Engineering (Electronics and Telecommunication Engineering) w.e.f. 2021 – 22 Page **48** of **69** 

& suitability in embedded appl	ication. Introduction to Tiva TM4	C123G Series Overview,
A <b>DM7</b> · registers CDSD SDS	ELIBRARY	onby APM7 data flow model
<b>ARM</b> : legisles, CFSR, SFS	operations	opity, ARM7 data now model,
ARM7 Based Microcontrolle	<b>r</b> LPC2148: Features. Architectur	e (Block Diagram and Its
Description ), System Control	Block (PLL and VPB divider), N	Memory Map, GPIO, timer,
Unit–III:	No. of Lectures: 08 Hours	Marks: 12
Real World Interfacing with	ARM7 Based Microcontroller	
Programming in assembly la	anguage/ Embedded C, Interfac	cing with LED, LCD, GLCD,
KEYPAD, stepper / dc motor	, simple LPC2148 GPIO Program	nming examples Using timers of
LPC2148 to generate delay, Int	terrupt structure of LPC2148, prog	gramming for UART
on-chip devices ADC, DAC,W	DT,USB,PWM.	
Unit_IV•	No. of Lectures: 09 Hours	Marks: 12
Real Time Operating System	Concent	
Types of OS. Tasks, process, T	Threads. Multiprocessing and .Mul	ltitasking. Task scheduling.
Threads, Process, Scheduling	Task communications. Task svnc	hronization, how to choose
RTOS, Overview of operating	system (off-the-shelf, Embedded,	RTOS, Handheld), Introduction
to JAVA Programming for Em	bedded System	
Introduction to Ucos II RTOS a	and it's features, study of kernel s	tructure of Ucos II.
Case study of digital camera an	d automatic chocolate vending m	achine (without codes)
	1

	Mobile Communication Network (Professional Elective Course – VI)							
COURSE OUTLINE								
Course	Mobile C	obile Communication Network			Short	MCN	Course	e
Title:   Code:								
Course d	lescription	1:						
This cou	This course describes the fundamentals of telecommunication switching and their traffic. This							
course wi	ill help to i	understand the co	ncept of mol	oile manag	gement a	nd coding	in GSM &	<u>¢ CDMA.</u>
	bile	Hours/week	No. of we	eeks	Total	iours	Semest	ter credits
Commu	inication	3	14		42		3	
Net	work							
Prerequi	site cours	e(s):	. 1.	1.1.				
Knowl	edge of ba	asic Computer N	etworking a	ind their c	oncept.			
Course o	bjectives:							
	0							
1. To lear	rn and und	erstand the basic	principles of	Telecom	nunicati	on switchi	ng, traffic	and
networks							0	
2 To lear	rn and und	erstand basic cond	cepts of cellu	ular systen	n, wirele	ess propaga	ation and t	he
technique	es used to i	maximize the capa	acity of cellu	ılar netwo	rk.			
3To lear	n and unde	erstand architectur	re of GSM a	nd CDMA	system			
4 To und	lerstand m	obile managemen	t, voice sign	al process	ing and	coding in (	GSM and	CDMA
system								
Course o	utcomes:							
After suc	cessful con	mpletion of this co	ourse the stu	dent will b	be able t	o:		
After suc	cessfully c	completing the con	urse students	s will be al	ble to			
1 Explain	and apply	the concepts tele	ecommunicat	tion switch	hing, tra	ffic and ne	tworks	
2 Analyz	e the teleco	ommunication tra	ffic.					
3 Analyz	e radio cha	annel and cellular	capacity.					
4 Explai	n and appl	y concepts of GS	M and CDM	A system				
			~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	~~~~~				
			COURSE	CONTEN	NT .			
Mobile (	Communic	cation Network		Semeste	r:			
Teaching	g Scheme:			Examina	ation sc	heme		
Lectures	:	3 hours/we	eek	End sem	iester ex	kam (ESE)	):	60 marks
				Duration	n of ESI	E:		03 hours
Internal Sessional Exams (ISE): 40 marks								
Unit–I:		No.	of Lectures	: 09Hours	s	Marks: 12	2	
Telecom	municatio	n Switching & T	raffic					
Telecom	municatior	switching: Mess	age switchin	g, Circuit	switchin	ng, Manual	System, I	Electronic
Switching. Digital switching: Switching functions, Telecommunication Traffic: Unit of Traffic,								
Traffic measurement, A mathematical model, Lost- call systems: Theory, traffic performance, loss								

systems in tandem, traffic tables. Queuing systems: Erlang Distribution, probability of delay, Finite queue capacity, Systems with a single server, Queues in tandem, delay tables and application of Delay formulae

Unit–II:No. of Lectures: 09 HoursMarks: 12Switching Networksand SignalingSingle Stage Networks, Gradings, Link Systems, Grades of service of link systems. Time DivisionSwitching: Space and time switching, Time division switching networks, Synchronization, Callprocessing Functions, Common Control, Reliability, Availability and Security. Signaling:Customer line signaling. FDM carrier systems, PCM signaling, Inter-register signaling, Commonchannel signaling principles, CCITT signaling No. 6, CCITT signaling No. 7, Digital customer linesignalingUnit–III:No. of Lectures: 08 HoursMarks: 12Cellular ConceptsEvolution of Wireless systems, Introduction to cellular telephone system, Frequency reuse,

Channel Assignment, Handoff strategies, Cell Splitting, Propagation Mechanism: Free space loss, Reflection, Diffraction, Scattering. Fading and Multipath: Small scale multipath propagation, Impulse response model of multipath channel. Multiple Access Techniques-TDMA, FDMA, CDMA

# Unit–IV: No. of Lectures: 08 Hours Marks: 12

First and Second Generation Mobile Systems

First Generation Cellular Systems, AMPS, GSM Cellular Telephony: Introduction, Basic GSM Architecture, Basic radio transmission parameters in GSM system, Logical Channels, GSM time hierarchy, GSM burst structure, Description of call setup procedure, Handover, Modifications and derivatives of GSM.

Unit–V: No. of Lectures: 08 Hours Marks: 12 GSM Services , GSM Physical layer

Speech Coding and decoding, GMSK modulation, Data transmission in GSM: Data Services, SMS, HSCSD, GPRS, EDGE. CDMA Based Mobile Systems Motivation for CDMA use, Spreading Sequences, Basic Transmitter and Receiver schemes, IS-95 system: Frequency Range, Downlink transmission, Uplink transmission, Power control, Introduction to 3G mobile systems: W-CDMA and cdma-2000

Unit–I:	Unit-I:     No. of Lectures: 08 Hours     Marks: 12									
Important parameters governing the high speed performance of devices and circuits:										

Syllabus for Final Year Engineering (Electronics and Telecommunication Engineering) w.e.f. 2021 – 22 Page **53** of **69** 

Transit time of charge carriers, junction capacitances, ON-resistances and their dependence on the device geometry and size, carrier mobility, doping concentration and temperature; important parameters governing the high power performance of devices and circuits: Break down voltage, resistances, device geometries, doping concentration and temperature

Unit–II:	No. of Lectures: 08 Hours	Marks: 12			
Materials properties: Merits of	III -V binary and ternary compound	and semiconductors (GaAs, InP,			
InGaAs, AlGaAs, SiC, GaN etc	c.), different SiC structures, silico	n germanium alloys and silicon			
carbide for high speed devices,	as compared to silicon based dev	ices, outline of the crystal			
structure, dopants and electrical	l properties such as carrier mobili	ty, velocity versus electric field			
characteristics of these material	ls, electric				
field characteristics of materials	s and device processing technique	es, Band diagrams, homo and			
hetro junctions, electrostatic cal	lculations, Band gap engineering,	doping, Material and device			
process technique with these III	I-V and IV – IV semiconductors.				
Unit–III:	No. of Lectures: 08 Hours	Marks: 12			
MOS Diode: Structure - band d	liagram - operation - C–V charact	eristics - effects of oxide			
charges - avalanche injection -	high field effects and breakdown;	Heterojunction Based			
MOSFET: Band diagram - strue	cture - operation - I-V and C-V c	characteristics (analytical			
expressions) - MOSFET breakd	lown and punch through - subthre	eshold current - scaling			
down; Alternate High k-dielect	ric Materials: HF-MOSFETs - SO	OI MOSFET - buried channel			
MOSFET - charge coupled dev	ices.				
Unit–IV:	No. of Lectures: 09 Hours	Marks: 12			
Metal semiconductor contacts	and Metal Insulator Semicondu	actor and MOS devices: Native			
oxides of Compound semicone	ductors for MOS devices and th	ne interface state density related			
issues. Metal semiconductor co	ontacts, Schottky barrier diode, M	Aetal semiconductor Field Effect			
Transistors (MESFETs): Pin-	ch off voltage and threshold	voltage of MESFETs. D.C.			
characteristics and analysis of	of drain current. Velocity ove	rshoot effects and the related			
advantages of GaAs, InP and	I GaN based devices for high	speed operation. Sub threshold			
characteristics, short channel ef	fects and the performance of scal	ed down devices.			
Unit–V	No. of Lectures: 09 Hours	Marks: 12			
High Electron Mobility Transi	stors (HEMT): Hetero-junction a	levices. The generic Modulation			
Doped FET(MODFET) structu	are for high electron mobility re	alization. Principle of operation			
and the unique features of HEMT, InGaAs/InP HEMT structures: Hetero junction Bipolar					
transistors (HBTs): Principle of operation and the benefits of hetero junction BJT for high speed					
applications. GaAs and InP based HBT device structure and the surface passivation for stable					
high gain high frequency performance. SiGe HBTs and the concept of strained layer devices;					
High Frequency resonant - tuni	neling devices, Resonant-tunnelin	ig hot electron transistors

### **Guide lines for ICA:**

Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.

### **Guidelines for ESE:**

ESE will be based on the Laboratory assignments submitted by the students in the form of journal. In the ESE (PR), the students may be asked to perform the practical assignment with minor modification.

Evaluation will be based on the paper work of algorithm, understanding of the logic and the syntax, quality of the program, execution of the program, type of input and output for the program.

				(ICA)	):			marks			
In continuation with	Project	(Stage - I) at	Semest	er – V	VII, by the	e end of S	Semester –	VIII, the			
students should comp	olete im	plementation of	of ideas	as fo	rmulated	in Project	(Stage –	I). It may			
involve fabrication /	coding,	experimentati	on, data	anal	ysis withi	n realistic	constraint	ts such as			
economic, environme	economic, environmental, social, ethical, health and safety, manufacturability, and sustainability.										

It may also include testing, results and report writing. Each student group should submit complete project report at the end of Semester-VIII in the form of Hard bound. Assessment for the project shall also include presentation by the students.

Each student group is required to maintain separate log book for documenting various activities of the project.

Suggestive outline for the complete project report is as follows.

# Abstract

# Chapter 1. Introduction

- Background / Literature Survey
- Motivation
- Problem Definition
- Scope
- Objective
- Selection of Life cycle Model for Development
- Organization of Report
- Summary

### **Chapter 2. Project Planning and Management**

- Feasibility Study
- Risk Analysis
- Project Scheduling
- Effort Allocation
- Cost Estimation
- Summary

# **Chapter 3. Analysis**

- Requirement Collection and Identification
- H/w and S/w Requirement (Data, Functional and Behavioral)
- Functional and non-Functional Requirements
- Software Requirement's Specification (SRS)
- Summary

# Chapter 4. Design

- System Arch
- Circuit Diagram and Data Flow Diagram
- UML Diagrams (Use case, Class, Sequence, Component, Deployment, State chart, Activity diagram etc.)
- Summary

### **Chapter 5. Coding/Implementation**

• Algorithm/Steps

- Software and Hardware for development in detail
- Modules in Project

# **Chapter 6. Testing**

- Black Box/White Box testing
- Manual/Automated Testing
- Test Cases Identification and Execution (Test case ID, Input, Output, Expected Output, Actual Output, Result (Pass/Fail) etc.)

### **Chapter 7. Results and Discussion**

**Chapter 8. Conclusion & Future Work** 

**Bibliography** 

Index

### Appendix

### **Guide lines for ICA:**

The Internal Continuous Assessment (ICA) for project shall be based on continuous evaluation of students' performance, active participation, knowledge / skill acquired throughout semester and presentation by the students. The assessment shall be done jointly by the guide and departmental committee. A three-member departmental committee including guide, appointed by Head of the department, shall be constituted for the assessment. The assessment for Project in Semester – VIII shall be as per the guidelines given in Table – B.

_	Table – B										
		As	ssessment by (	Guide		Assessment by Departmental					
						Committee					
Sr	Nam	Attendan	Implement	Resu	Rep	Depth of	Presenta	Demonstra	Tot		
	e of	ce /	ation	lts	ort	Understan	tion	tion	al		
Ν	the	Participa				ding					
0.	Stud	tion									
	ent										
	Marks	5	5	5	5	10	10	10	50		

### **Guidelines for ESE:**

In End Semester Examination (ESE), the student may be asked for presentation / demonstration and questions on Project. Evaluation will be based on answers given by students in oral examination.
